

Product Category:	Modem Solutions
Product Name:	8 Auxiliary Input
Product Description (SHORT):	The SmarToo 8 x Auxiliary Input Expansion is a versatile digital input unit, which offers 0-5V and 4-20mA interfacing for RTUs.
Product Description (LONG):	<p>The SmarToo 8 x Auxiliary Input Expansion is a versatile digital input unit. By default it is an 8 x Digital Input unit with common ground connection between them and thus needs to be switched only with a potential free contact.</p> <p>These units connect to the SmarToo GSM /GPRS/3G Modem through the Expansion Port and can be scaled to 56 in total of any variations for different Site and Application requirements. They offer DIN Rail Mounting to comply with Industrial Standards.</p> <p>The Expansion units offer typical 0-5V and 4-20mA interfacing for RTU – Switching, Control, Event Notification and Monitoring requirements. Customer Communications can be facilitated through SMS, E-Mail, GPRS, USSD and Web Interfaces which makes these solutions versatile enough to scale for any requirement from either the enthusiastic Hobby right through to the High Value Asset Management requirements of Industry – Fast, Reliable, Cost Effective and most importantly Wireless.</p>
